PROFESSIONAL SUMMARY

Machine Learning Engineer with 4+ years experience building predictive models, running end-to-end ML lifecycle workflows, and translating complex analyses into actionable product and business insights. Proven track record of quickly mastering new tools, domains, and methodologies, as well as effectively collaborating cross-functionally with product, engineering, and executive stakeholders. Proficient in Python and R with expertise in geospatial applications.

TECHNICAL SKILLS

Languages: Python, R, SQL, C++, SAS, MATLAB, HTML, CSS, Javascript, Shell Scripting

Tools & Platforms: JupyterLab, RStudio, QGIS, Tableau, Docker, Google Cloud Platform, MLFlow, Github, GEE

Specializations: Statistical Modeling, Predictive Analytics, Remote Sensing, Spatial Statistics, Data Visualization

Types of data: Structured & Unstructured Data, Time Series, Vectors/Rasters, Sensor Data, Geospatial, Text

EDUCATION

Georgia Institute of Technology

Expected graduation: 2027

Masters of Science, Analytics

University of California, Riverside

2017 - 2021

Bachelor of Science, Major in Statistics, Minor in Computer Science

WORK EXPERIENCE

Machine Learning Engineer - Atlas AI, Remote

2022 - present

Geospatial Data Analyst - Atlas AI, Remote

2022 - 2025

- Collaborated with product and engineering teams to define analytical needs and frame problems, acquiring relevant geospatial and sensor-based data from public and third-party sources.
- Led causal inference analysis as the primary individual contributor, reviving a stalled workstream by navigating legacy code and incomplete documentation to deliver key analytical products on a tight contractual deadline.
- Designed and executed end-to-end modeling workflows from feature engineering and PCA to model architecture selection and benchmarking.
- Developed and deployed a range of gradient boosting Machine Learning models, utilizing MLFlow for comprehensive version tracking from initiation to completion.
- Mentored and onboarded team members on inference pipelines, translating hands-on experience across multiple product lines into structured knowledge transfer.
- Presented analytical findings and product demos directly to external clients and partners, packaging code, data, and reporting into polished deliverables for stakeholder review.

Research Assistant - Center of Food Security & Environment, Stanford University

2021 - 2022

- Conducted rigorous statistical analysis investigating the relationship between environmental variables and health outcomes in developing countries, using remote sensing and public health data.
- Performed large-scale data extraction from satellite imagery (Sentinel-2) and web sources using Google Earth Engine and Python (Selenium), processing structured and unstructured datasets.
- Conducted extensive literature reviews on remote sensing applications and micronutrient deficiencies to support research objectives.
- Developed R scripts to create exploratory maps and graphs, and implemented linear and random forest models with cross-validation for data analysis.
- Authored the scientific abstract and presented a poster at the 2021 American Geophysical Union (AGU) Conference.
